#### (c) Valuation technique used for valuating fair value of stock options

Stock options granted in the fiscal year were valuated using the following valuation technique.

- (i) Valuation technique: Black-Scholes option-pricing model
- (ii) Principal parameters used in the option-pricing model

Date of resolution	June 26, 2009
Expected volatility (*1)	49.10%
Average expected life (*2)	5 years
Expected dividends (*3)	¥3 per share
Risk-free interest rate (*4)	0.70%

- (\*) 1. Calculated based on the actual stock prices during the five years from June 2004 to June 2009.
  - 2. The average expected life could not be estimated rationally due to insufficient amount of data.

    Therefore, it was estimated assuming that the options were exercised at the mid point of the exercise period.
  - 3. Expected dividends are based on the actual dividends on common stock for the fiscal year ended March 31, 2009.
  - 4. Japanese government bond yield corresponding to the average expected life.

# (d) Method of estimating number of stock options vested

Only the actual number of forfeited stock options is reflected because it is difficult to rationally estimate the actual number of stock options that will be forfeited in the future.
